

Pin hole camera

Wednesday, September 24, 2008
9:52 AM

To understand how a pin-hole camera works, we must employ a model for light as a ray. If we assume that light travels in straight lines, we can understand and predict the types of images that can be achieved by this camera.

To make this camera, we need a hole-card, to be placed in front of a screen. (Film can be secured to the screen if desired)
